COMPANY FACT SHEET

Reverse Engineering Services Limited (RESL) is a Specialist Consultancy with over 25 years' Experience solely focusing on Decommissioning of Facilities, Pipelines and Wells – Onshore, Offshore and Subsea.

RESL works in every major petroleum province of the world; identifying innovative solutions to the unique challenges of decommissioning and well abandonment.

RESL creates bespoke solutions fulfilling project and client requirements, drawing upon experience and expertise from our core team and global network of over 100 specialists.

The company works with petroleum companies, governments, regulators, contractors, international agencies, legal firms, insurance companies and investment banks worldwide.

RESL helps formulate and shape national decommissioning policy and guidelines and engages both regulators and operators in how to optimally interpret the national regulatory framework.

RESL work in all Front-End Loading & Execution stages, on the decommissioning of facilities, pipelines and wells - onshore, offshore and subsea.

RESL's complementary expertise in decommissioning regulations, facility and well P&A across the full spectrum of this growing business area is a unique offering.

RESL has an extensive decommissioning database, allowing for benchmarking of cost, durations and lessons learned from actual, completed projects. The company constantly captures and transfers learning and improvements from projects at different levels and areas.

Importantly, RESL area lead player in helping develop the next generation of capability that is required to meet the decommissioning challenge. The company is the Society of Petroleum Engineers (SPE) global trainer on decommissioning and well abandonment, and is a member of AACE International and Decom North Sea.
